

EZE

Litepaper

Version 1.0

What is EZE?

EZE is a multi-product DeFi platform / app.

What is the vision of EZE?

The EZE team has a clear goal in mind, to create a proper platform for cryptocurrency enthusiasts, we have many golden ideas that will surely blast off. The EZE app serves as the foundation for our up and coming features such as V2 Swap, V3 Clique, etc.

Who runs EZE?

Currently, most of the decisions are taken by the 3 founders, but we plan on being completely transparent with our community and letting them in on our future and upcoming decisions.

Why do we need EZE?

EZE will make market breaking innovations in the crypto space. Allowing versatility for Crypto project owners (EZE Blockchian) and giving retail investors access to experienced traders that can manage their funds and also being a part of their community!

The great thing is that anyone without technical expertise can understand the value of our ecosystem.

EZE Clique

Summary

EZE Clique is a Crypto investment management social network. it will bring together Experienced traders and retail investors by the power of blockchain.

Problem

Unlike the stock market where passive investors can select managed funds to invest in, crypto markets have yet to find a way for investors to find Experienced traders or managed funds with proven track performance. Therefore, instead of Retail investors possibly being duped by a scammer they will have the choice to choose a verified investment manager found on Clique. Also in 2021 scammers stole \$14B, if people had a more trusted option to invest in, high chances they would put their investment with EZE. Another major point is large signal trade groups, not everyone is always accessible to their phone or desktop to copy a trading signal, so our smart contracts would immensely prevent this by aligning both trades simultaneously.

Solution

EZE will solve this by allowing retail investors on our platform to join the Clique of their preferred trader. It will be small (2-150) Persons individual communities of Traders and investors, learning from one another, and making investments together. This small community will mostly be used in a chat, similar to Telegram.

EZE Blockchain

Summary

The EZE Blockchain aims to support our Clique platform by making it in house secured smart contracts between our active traders and retail investors, also our EZE Blockchain will be accessible to other cryptocurrency projects for flexibility with transaction fees and funds. Currently EZE is available on Avalanche, Ethereum, and BSC.

Problem

Lack of versatility on the blockchain when it comes to supporting other Crypto projects, they usually have to pay transaction fees in the blockchains Coin.

Solution

Normally DAPP users have to pay transaction fees in native blockchain currency, EZE will give DAPP developers an opportunity to charge transaction fees on whatever token they choose: EUSD, USDT, DAI, or their own smart contract based token.

Validator

The EZE Team will construct the blockchain in a way to have our investors become our validators to earn passive income / fees through each transaction on the EZE Blockchain. Percentages will be distributed like this (Validators ? %, Users refund ? %, EZE ? %).

EUSD Stable Coin

Summary

EZE plans to build a Decentralized stable coin backed by Gold reserves.

Problem

Nowadays nearly 100% of assets in the Crypto space have no intrinsic value or official assets backed by it. So the security tends to be very questionable to the public.

Solution

Having a Decentralized Stable coin backed by Gold will benefit both our investors and the crypto community. This will also plan to use this as a marketing tactic.

EZE NFT's

NFT by EZE

- 1000 Free NFTs for our community
- Community building
- Recognition from NFT community
- Cosmetic appearances on their EZE profile
- Raffle winners
- Special benefits will be given to NFT holders on our blockchain
- Used as a marketing tactic

**The EZE app will be supporting
NFTs in the 1.5 Build!**

EZE Swap

Users will be able to swap any Crypto that they choose to in our next V2, this version will be implemented as soon as possible so our future Clique clients can comfortably store or exchange their funds on our platform.

EZE Tokenomics

Token Detail

Ticker: EZE

Standard: ERC-20

Network: Avalanche C-Chain

Max Supply: EZE and no supply cap (community determines)

Total Supply (*at genesis): 777,777,777

Token Distribution

Tech used to build EZE

- NodeJs as backend
- Mongodb as database
- Radis as caching database
- ReactJs & React-Native for Web & Mobile applications
- Alchemy.com for ethereum nodes
- QuickNode for avalanche & binance node
- Fixer.io for forex data
- Sentry for crash monitoring
- Coingecko api for crypto data
- Amazon AWS for Server, CDN and Media storage
- C/C++ for blockchain
- Python for big data and backend
- Go lang for blockchain tooling
